17-10-2022

```r
install.packages("lpSolve",repos = "http://cran.us.r-project.org")
```

```
## Installing package into 'C:/Users/ASUS/AppData/Local/R/win-library/4.2'
## (as 'lib' is unspecified)

## package 'lpSolve' successfully unpacked and MD5 sums checked
##
## The downloaded binary packages are in
##   C:\Users\ASUS\AppData\Local\Temp\RtmpKeRQEL\downloaded_packages
```

```r
library(lpSolve)
```

Formulate and solve this transportation problem using R

```r
Shipping<- matrix(c(22,14,30,600,100,
                    16,20,24,625,120,
                    80,60,70,"-","-"),ncol=5,byrow= TRUE)
colnames(Shipping)<- c("Warehouse1","Warehouse 2","Warehouse 3","Production cost","Production Capacity")
rownames(Shipping)<-c("PlantA","Plant B"," Monthly Demand")
Shipping<-as.table(Shipping)
Shipping
```

```
##                 Warehouse1 Warehouse 2 Warehouse 3 Production cost
## PlantA          22         14          30          600
## Plant B         16         20          24          625
##  Monthly Demand 80         60          70          -
##                 Production Capacity
## PlantA          100
## Plant B         120
##  Monthly Demand -
```

```r
costs<- matrix(c(622,614,630,
                 641,645,649),ncol =3, byrow=TRUE)
costs
```

```
##      [,1] [,2] [,3]
## [1,]  622  614  630
## [2,]  641  645  649
```

```r
##Set up constraints
row.signs<- rep("<=",2)
row.rhs<- c(100,120)
##Demand Side
col.signs<- rep(">=",3)
col.rhs<- c(80,60,70)
```

Run

```r
lptrans<-lp.transport(costs,"min",row.signs,row.rhs,col.signs,col.rhs)
```

```r
##Value of nvariables
lptrans$solution
```

```
##      [,1] [,2] [,3]
## [1,]    0   60   40
## [2,]   80    0   30
```

```r
lptrans$objval
```

```
## [1] 132790
```
